DISCOUNT RAMPS BIG BOY II RAMPS

THE PRODUCT: Discount Ramps Big Boy II Ramps are designed to remove any worry about ramp strength and security, even with the considerable weight of UTVs. These unique aluminum ramps also serve as a rock-solid means of loading ATVs and motorcycles. They cost \$420, but we haven't found ramps with comparable features at any price.

Total capacity of the ramp pair is 2500 pounds. That means it would only take one of the Big Boy II ramps to handle the 1049-pound Yamaha Rhino 700 or the 1185 Polaris Ranger XP and a driver. The two ramps can be used individually, or connected with four brackets for loading motorcycles. The ramps fold for storage and are ten feet long to keep the ramp angle reasonable, even when climbing into taller trucks. A four-inch solid lip supports the ramps on the vehicle. These ramps are made in America and have a five year manufacturer's warranty.

PERFORMANCE: For such a routine activity, loading and unloading has given us more than its share of tense moments. Without thinking about it, we've driven up ramps without checking their capacity and heard and felt things we shouldn't have. We made the easy mistake of using ATV ramps for UTVs. It works with the right ramps, but if you use the wrong ones, you are asking for trouble.

We've never ridden on ramps that gave a more secure feeling than Discount Ramps' Big Boy IIs. They are unflinching compared to strong ATV ramps, and they don't move from the tailgate. The four-inch front lip gives the ramps a secure perch on the tailgate and the supplied tie-down-like straps are great insurance against the ramps' kicking away.

THE VERDICT: These ramps weigh more, 38 pounds each, and cost
