

THE  
**Nimbus**  
INFLATABLE ROOF RACK  
**INSTRUCTIONS**

**PARTS LIST:**

**INSTALLATION:**

**STEP 1.** Open the car doors and roll the rack tubes onto the roof with the air nozzle facing up. Feed the attaching strap through the buckle and tighten. Be sure the buckle is not in the way of shutting the door.

**STEP 2.** Turn the valve counter-clockwise to open the valve on the inside of the tube. The tubes should inflate a little on their own. To add more air, blow into the valve and then quickly seal the valve by turning it clock-wise.

**STEP 3.** To secure cargo to the rack tubes, feed the securing cargo straps through the tie down loops and then tighten until snug. An alternate securing strap runs from one end of the Nimbus to the other, providing variable tie points. The Nimbus Roof Rack can support up to 200 lbs of cargo on a vehicle roof, provided the car Nimbus is being used with is capable of supporting 200 lbs on the roof.
